

While PGRs are not necessary for height control on Maracas Brazilian Fireworks (*Porphyrocoma pohliana*), a Bonzi spray will result in more silver foliage color and about 2 weeks earlier flowering time (left plant). Apply Bonzi at a rate between 3 and 5 ppm. A higher rate will cause foliage puckering.

Brazilian Fireworks Temperature Response

Temp 65F

Temp 70F

Maracas Brazilian Fireworks (*Porphyrocoma pohliana*) is a warm-season crop. Under cold temperatures (below 65°F/18°C), plants will grow very slowly and show yellowing in leaves (left plant).
